

A Simple Revolution

Quality business applications:
On time, under
budget, zero defects, full functionality—
every project, every time

Can Project Success Be Dramatically Improved?

Studies show that the single biggest cause of project failure is ineffective, inconsistent, and incomplete requirements. But without a way to objectively determine when a requirement is “complete”, it has been impossible to effectively improve. The problem is compounded because we are often unaware of requirement and specification issues until well into coding; and the later a problem is discovered, the more expensive it is to fix (up to 100x). The result: 70% of projects are over budget, late, and unable to deliver on expected business value.

Right From The Start (RFTS™) Solution

Our solution eliminates ambiguities and unknowns that create failure in the first place. RFTS is the only solution that can assure all stakeholders – from business people to coders – that the requirements and specs are complete and accurate from the very beginning. No more questionable promises, no more expanding scope, and no more blown budgets – just consistent delivery of real business benefits through information technology.

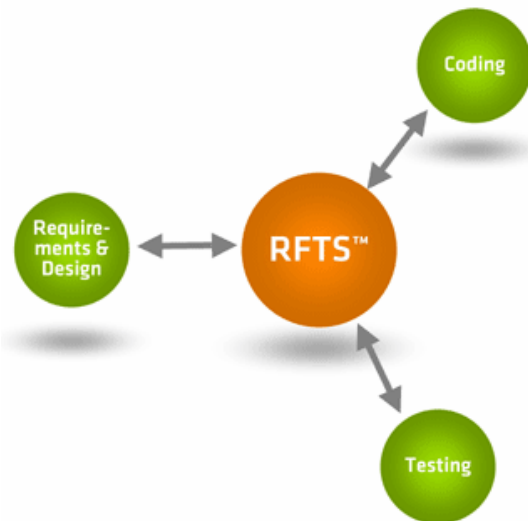

Critical Logic is the only company that has a solution that analyzes requirements, creates sophisticated and mathematically rigorous models, and generates 100% of functional specifications and tests (YES, we generate and automate all the functional tests). That’s why we can claim that we get your projects Right From The Start.

We know from over ten years of working with companies large and small that the business impacts are revolutionary. Our clients are consistently seeing:

- Zero or near zero functional defect applications.
- Rework reduced by 50% or more.
- Time-to-market and cost savings of 25% .
- Assurance that projects will consistently be completed on time, on or under budget, with full functionality, and outstanding quality.
